

EDITOR'S NOTE

Circulation: Cardiovascular Imaging's Top 10 Reviewers of 2022-2023

Robert J. Gropler , MD on behalf of the *Circulation: Cardiovascular Imaging* editorial team

The mission of *Circulation: Cardiovascular Imaging* is to publish leading-edge imaging science content that transforms cardiovascular care. The quality and impact of this content are critically dependent on the contributions and efforts of our extended team of peer reviewers, comprising hundreds of colleagues from around the world. We continually receive superb reviews for all of the papers that we send for peer review, and we are grateful to every person who has contributed to *Circulation: Cardiovascular Imaging* in this way. However, several reviewers distinguished themselves in this regard. To identify and recognize the top 10 reviewers of which one would be designated Reviewer of the Year, a selection process was performed based on objective criteria of the quality of reviews provided, total number of papers reviewed, proportion of invitations accepted, and timeliness of review submissions. The individuals are listed below. Many thanks and congratulations to all.

	<p>REVIEWER OF THE YEAR: Inga Voges, University Hospital Schleswig-Holstein, Campus Kiel</p>
	<p>Eddy Barasch, St. Francis Hospital/SUNY at Stony Brook, Roslyn, NY</p>
